

EDUCATION	
University College of Engineering Arni	Tamil Nadu, India
Bachelor of Engineering – Computer Science; GPA: 7.2	November 2022 – July 2026

SKILLS SUMMARY	
• Languages:	Python, SQL, JavaScript
• Frameworks:	Django
• Tools:	Excel, PowerPoint, Word, MySQL
• Platforms:	PyCharm, Idle, Eclipse, Visual Studio Code, IntelliJ IDEA
• Soft Skills:	Report Building, Excellent communication

WORK EXPERIENCE	
Web Developer Intern	July 01- July 31, 2025
○ Gained hands-on experience in front-end web technologies including HTML, CSS, and JavaScript, focusing on both design and functionality of websites. ○ Developed and styled multiple static web pages using HTML and CSS, improving understanding of web structure and responsive layouts. ○ Practiced basic JavaScript programming to add interactivity and enhance user experience on web pages. ○ Strengthened problem-solving and project implementation skills through structured tasks and real-time project exercises. ○ Acquired a comprehensive view of the web development process — from planning and design to functional deployment.	

PROJECTS	
Currency Converter System	February 2025- June 2025
○ Implemented multi-currency support to enable quick and accurate conversions between major and minor global currencies. ○ Integrated historical exchange rate data and charts to help users analyze currency trends over time. ○ Ensured data reliability and performance through secure API integration and optimized front-end design.	
Chatbot for Customer Service Description	February 2025- June 2025
○ Designed and developed an AI-powered chatbot to handle common customer service queries efficiently and accurately. ○ Collected, cleaned, and preprocessed domain-specific datasets to train the chatbot for real-world interactions. ○ Built a web-based, user-friendly chat interface for real-time communication and customer engagement. ○ Evaluated and optimized chatbot performance using accuracy and user satisfaction metrics for better deployment results.	
AI-Based Plant Disease Detection with Treatment Recommendation	January 2026 – May 2026
○ Developed an AI-powered plant disease detection system using CNN and MobileNetV2 for accurate plant leaf disease classification. ○ Implemented image preprocessing and data augmentation techniques to improve model accuracy and reduce overfitting. ○ Built a web-based application using Python, Flask, HTML, CSS, and JavaScript for real-time disease prediction. ○ Achieved high model performance using TensorFlow and Keras for efficient and lightweight deep learning classification. ○ Integrated MongoDB for storing disease information, symptoms, and treatment recommendations with multilingual support.	

CERTIFICATES	
Introduction to Generative AI (Google Cloud)	July 2025
○ Understood the core concepts of generative AI, including large language models (LLMs), diffusion models, and responsible AI principles. ○ Explored practical applications of generative AI in text, image, and content creation, enhancing knowledge of modern AI technologies.	
Full stack with Java	July 2025
○ Completed a comprehensive training program covering front-end, back-end, and database integration using Java-based frameworks. ○ Gained practical experience in developing and deploying dynamic web applications, strengthening development skills.
